SMARTSCENT

I O T A I R F R E S H N E R

What is Smartscent?

Our innovative air freshener unit, Smartscent, introduces world-first technology by utilising a proprietary algorithm that continually evaluates the air quality in your restroom and then deploys fragrance directly proportional to the level of unpleasant odour detected. This is vastly superior technology to other existing “dumb” units found on the market today that only spray based on a preset fixed time interval, regardless of restroom odour or usage. Furthermore, the SmartScent unit is also equipped with an innovative “self-test” feature that performs a daily physical spray test and then detects the resulting fragrance odour to confirm it is still operating correctly. If the self test fails, the unit reports this back to us and a hygiene technician can then be deployed to rectify any issues.

How is Smartscent different?

Currently most units on the market may stop working after a period of time due to faulty nozzles or cans or other damage and may result in several days, weeks or in some cases even months of downtime before the issue is noticed and then rectified. This means you may have been paying for a service that was never actually delivered. With Smartscent, these problems are now a thing of the past as we will know if there is an issue with one of our units before you do!

Key Features & Benefits

- Cloud connectivity via Shmik Hygiene IoT infrastructure.
- Wide range of premium scents.
- Self-test function to ensure unit is always operational.
- Each individual unit is remotely monitored, allowing us to respond quickly if there is a fault or if a service need exists
- Quiet operation ensuring it blends seamlessly into any environment.
- The tamper detection feature alerts us immediately if the unit has been tampered with or damaged.

Consumables

- 32 different fragrances to choose from.
- Replacement is based solely on usage frequency and only occurs when actually necessary, meaning no wasted product.

Product Dimensions

Height: 222mm
Width: 85mm
Depth: 75mm

Weight

Weight: 0.6kg

Capacity

Capacity: 6000 shots (on demand)

Hardware checklist

- Robust construction.
- Quiet operation.
- Lockable with built in tamper switch.
- Remote battery level monitoring.

Installation

Units are installed approximately 2m above floor height.
